

# **ORTEC<sup>®</sup> Driver Installation**

The driver for your instrument is supplied in both the root and \Driver directories of the accompanying MAESTRO-32 CD-ROM.<sup>1</sup> When your instrument is connected to the PC for the first time, Windows will automatically detect the new hardware and prompt you to choose between **Search for the Best driver ... (Recommended)** and **Display a List ...**. Click the **Search for** button, then **Next**. On the next page, select **CD drive**. The remainder of the installation is automatic. Once the driver is installed, you may install MAESTRO or other *CONNECTIONS* software.

## **USB Drivers**

ORTEC USB drivers work only with Windows 98, 2000, and XP.<sup>2</sup> If Windows does not auto-detect the new instrument, the USB may be disabled on your PC. To check this, go to Windows **Settings, Control Panel, Systems**, and click on the Device Manager tab. At the bottom of the list, look for the “Universal Serial Bus controller” entry. If it is not present, see the instructions for your PC on how to enable the USB.

---

<sup>1</sup>To obtain the driver files on floppy disk, contact your ORTEC representative.

<sup>2</sup>Windows 95 does not support USB internally, but some USB drivers have been created as additions to Windows 95. These USB drivers do not have complete support for the USB port and do not work with the **digiDART**, **DSPEC jr**, and other ORTEC USB instruments.
